

Cloud-Based File Sharing System Using Flask

Introduction

This project is a cloud-based file sharing web application developed using Python Flask. It allows users to register, login securely, upload, download and delete files through a user-friendly dashboard.

Objectives

To develop a secure file sharing platform, demonstrate web development concepts, and provide easy file management.

Features

User authentication, file upload, download, delete, session management, responsive UI.

Technology Used

Python Flask, HTML, CSS, Bootstrap, Local Storage.

Conclusion

The project successfully demonstrates a functional cloud-based file sharing system with secure login and efficient file handling.
